Simulation	ANHA4	ANHA12	AGRIF [CAA]	AGRIF [SPG]
Horz. Resolution	$1/4^\circ$	$1/12^\circ$	$1/12^\circ$	$1/12^\circ$
Core years	0.7	37.8	5.3	3.7

# ANHA: Arctic and Northern Hemisphere Atlantic

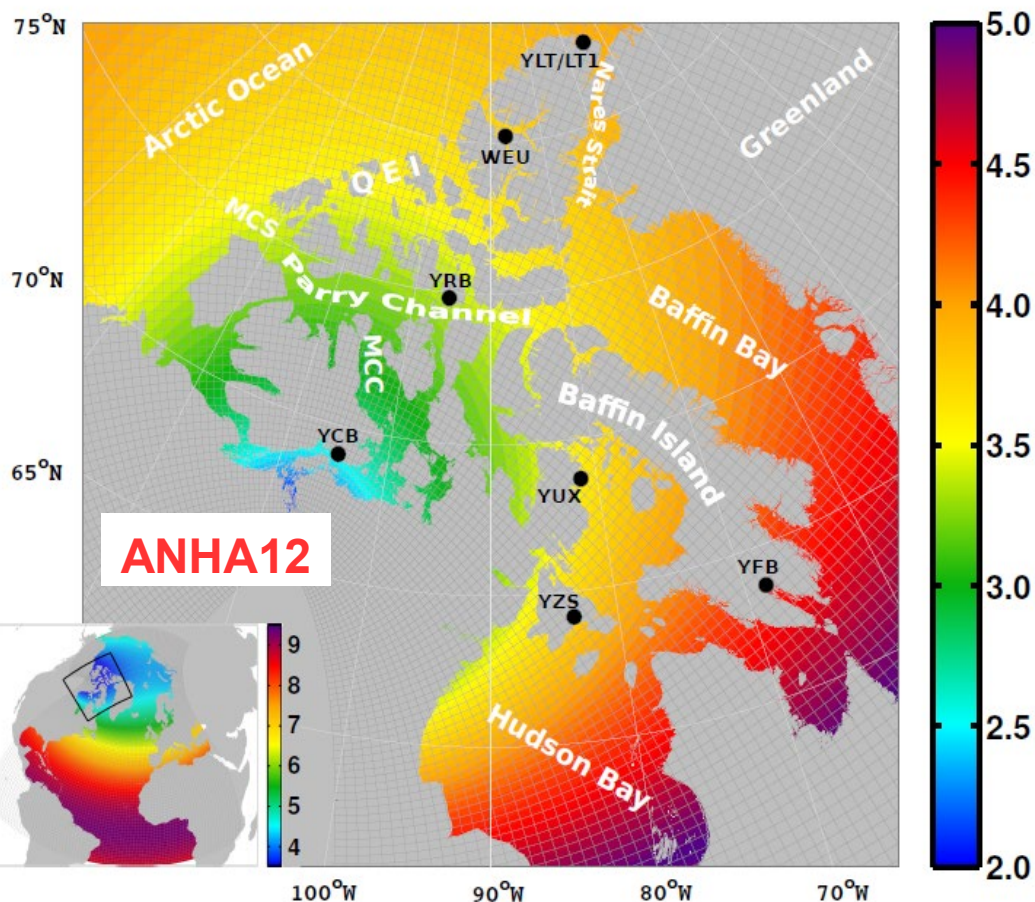

**ANHA12 & ANHA4**  
**Model : NEMO 3.4**  
**LIM2 + EVP**

**Resolution : 1/12 degree**  
**1/4 degree**  
**Mesh : 1632 x 2400**  
**544 x 800**  
**50 levels**

**LS : ~ 5 km**  
**~ 15 km**  
**CAA : ~ 4 km**  
**~10 km**

People. Discovery. Innovation.

## Initialization:

**3D T, S, U and V** (GLORYS2v3, Jan02)  
**Sea Ice**

## Atmospheric forcing:

**T2, Q2, U10, V10**  
**Precipitation**  
**Radiation (SW & LW)**

CGRF  
hourly  
33km

**Snow:** Calculated from precipitation

**Runoff:** Dai and Trenberth inter-annual  
Greenland Mass Loss (Bamber)  
+ Iceberg Module

**OBC: U, V, T and S** (GLORYS2v3)

**NO temperature & salinity restoring**  
**Jan 2002 – 2018**

**CGRF:** CMC GDPS reforecasts

**GDPS:** Global Deterministic Prediction System

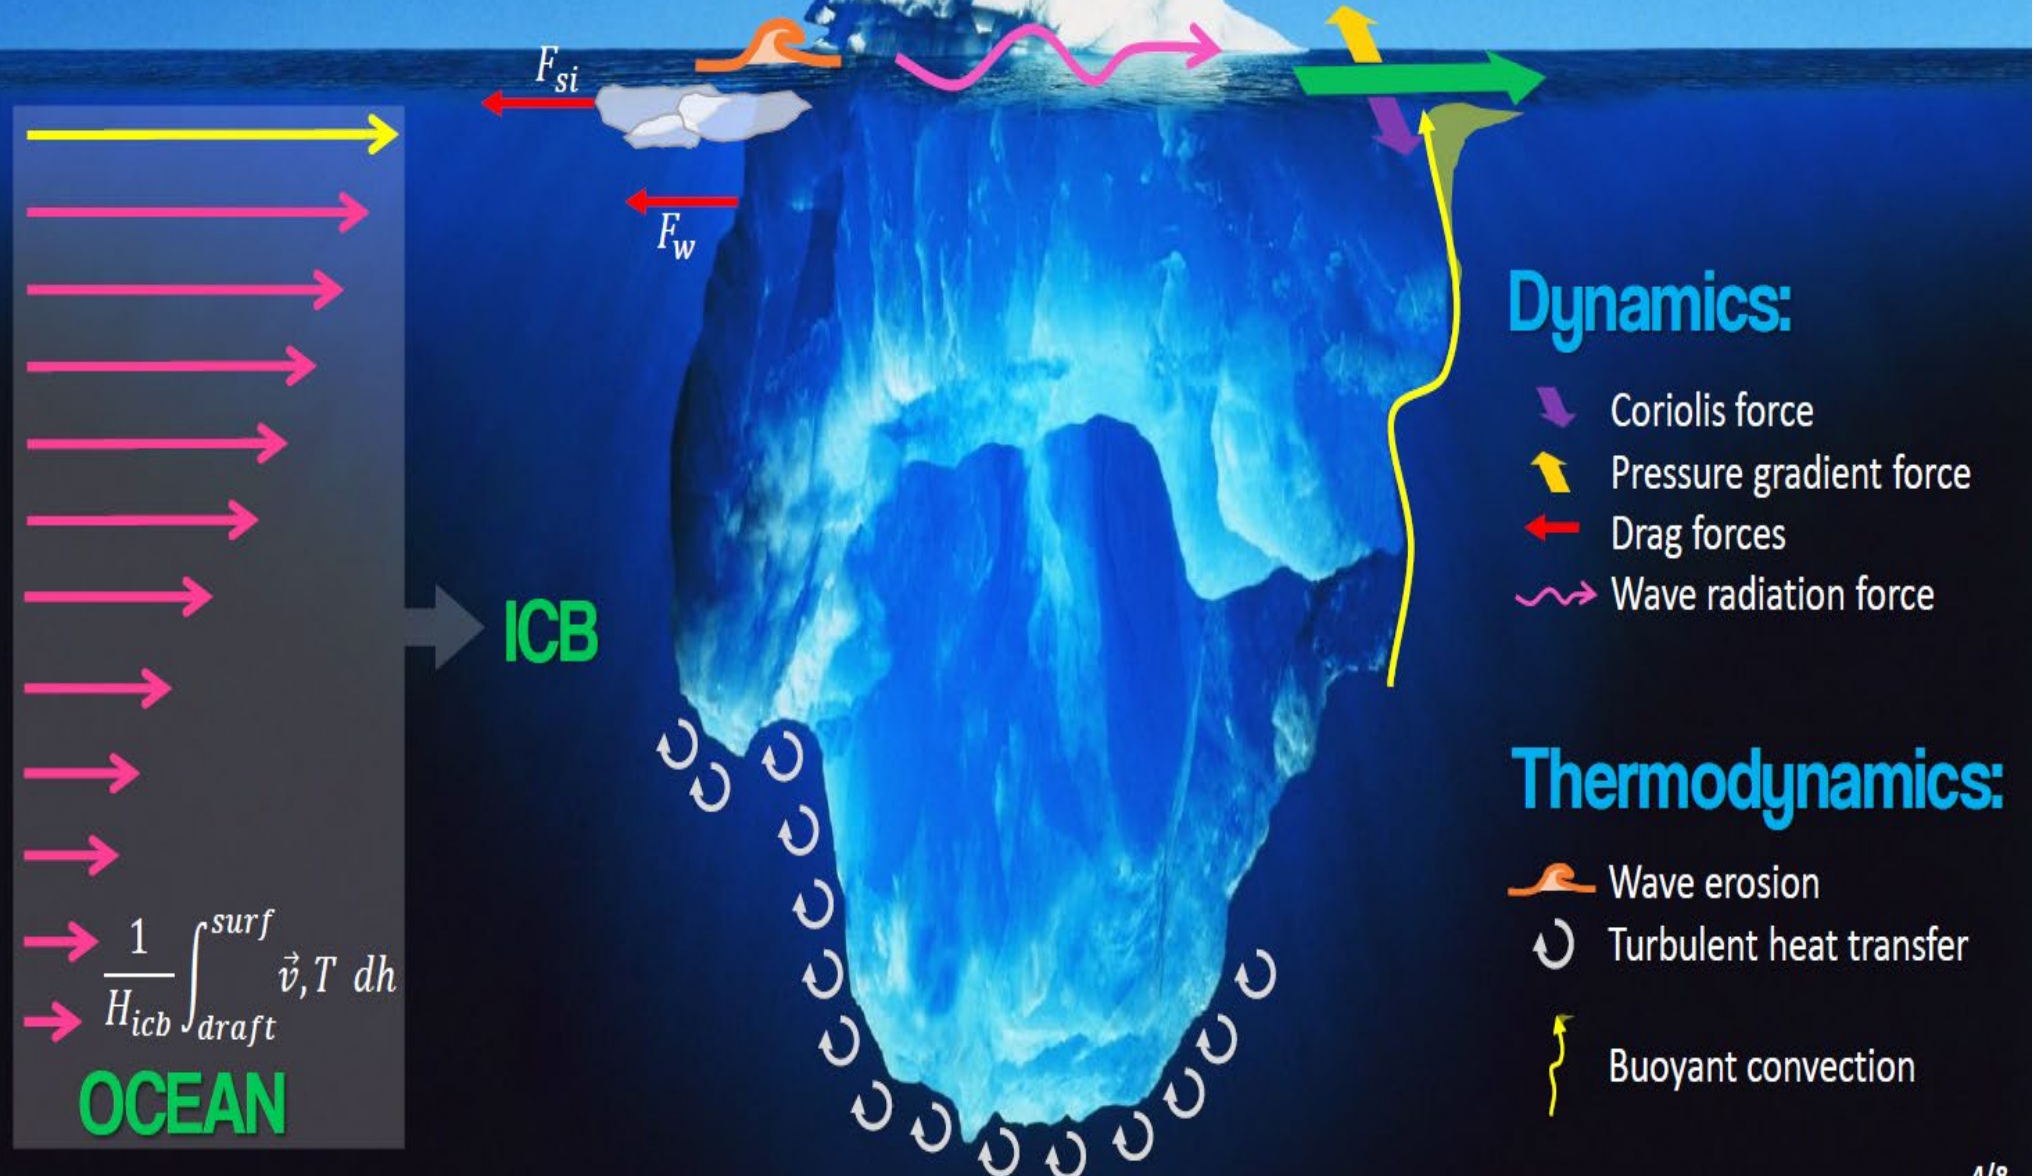

**CMC:** Canadian Meteorological Centre

**GLORYS:** GLObal Ocean ReanalYses and Simulations

❄️ **SURF** – Marsh et al., 2015

❄️ **VERT** – Merino et al., 2016

# Iceberg Model

## Dynamics:

- ↻ Coriolis force
- ↗ Pressure gradient force
- ← Drag forces
- ~ Wave radiation force

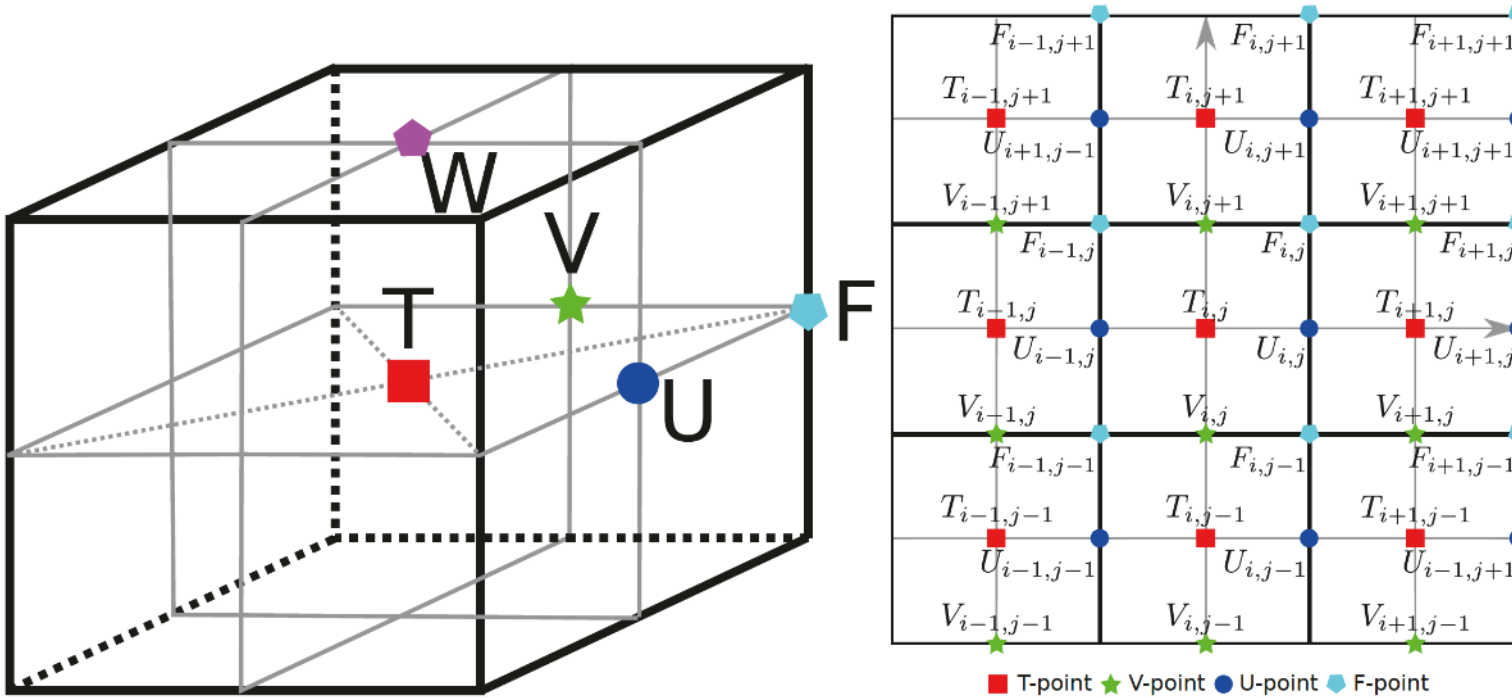

## Thermodynamics:

- ↪ Wave erosion
- ↻ Turbulent heat transfer
- ⚡ Buoyant convection

$$\frac{1}{H_{icb}} \int_{draft}^{surf} \vec{v}, T \, dh$$

**OCEAN**

3D (left) and 2D over the horizontal plane (right) representation of a C-grid cell in the NEMO with every computed variable. Note that  $\mathbf{T} = (T, S, p, \rho)$  is a vector containing scalar variables, and  $\mathbf{U} = (U, V, W)$  is the vector of velocity.

Grid Type	Variables
gridT	temperature (votemper), salinity (vosaline), sea surface height (sossheig), mixed layer depth (somxl010), turbocline depth (sohmlD)

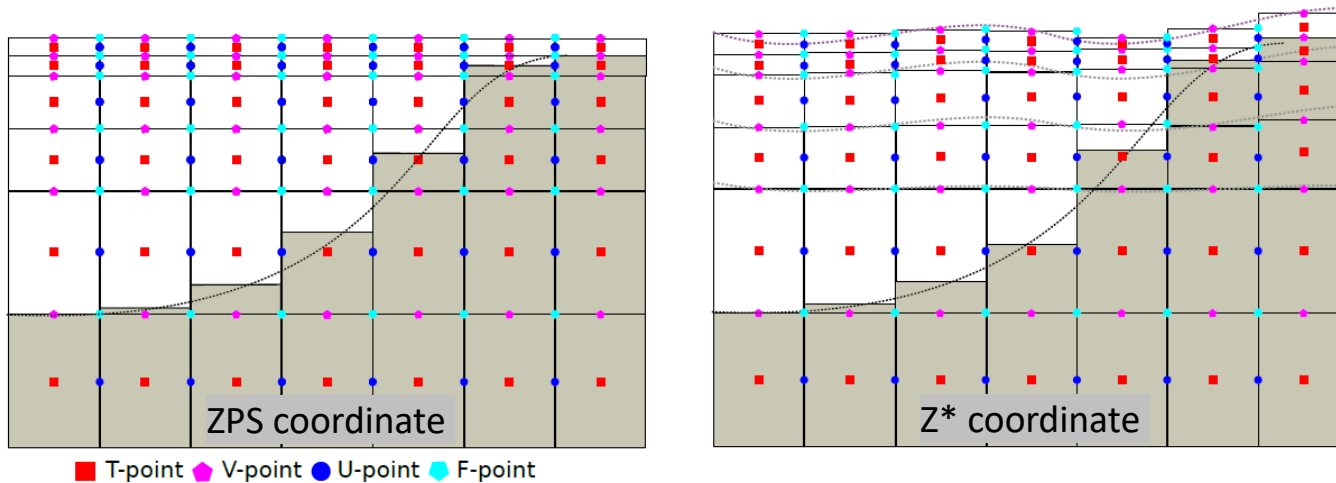

# Numerical Improvement: Tides

- Technical changes:

- New coordinate system:  $z^*$ 
  - Variable  $dz$
- New time split scheme
  - Barotropic  $t_s$ : 6 seconds
  - Baroclinic  $t_s$ : 1080 seconds

- Physical changes expected:

- Better mixing at the surface
- Better mixing at the bottom
- Addition of the tidal currents
