#### Sample Collection

##### Sample Collection 1

**Sampling Instrument Name** Sea Bird 911plus+

**Standardized Sampling Instrument Name** CTD

**Sample Collection Method Name** CTD profile

**Comment**

**Method Link**

**Method Summary** The CTD sensor is lowered and raised through the water column, capturing measurements of seawater temperature, salinity, and seawater pressure

**Method Description Type** Methods

## **Sample Collection 2**

**Sampling Instrument Name** SeaPoint sensor

**Standardized Sampling Instrument Name** Probe/Sensor

**Sample Collection Method Name** Chlorophyll-a fluorescence measurements

**Comment**

**Method Link**

**Method Summary** The SeaPoint sensor is lowered and raised through the water column, capturing measurements of chlorophyll-a fluorescence.

**Method Description Type** Methods

## **Sample Collection 3**

**Sampling Instrument Name** Seabird SBE-43

**Standardized Sampling Instrument Name**

**Sample Collection Method Name** Oxygen concentration measurement

**Comment**

**Method Link**

**Method Summary** The Seabird SBE-43 sensor is lowered and raised through the water column, measuring the dissolved concentration of oxygen.

**Method Description Type** Methods

## Analytical Method

### Analytical Method 1

**Analytical Method Name** Nitrate, nitrite, ammonium, phosphate, and silicate analysis

**Method Link** <https://doi.org/10.1002/9783527613984.ch10>

**Method Summary** Nutrient samples were collected directly from the Niskin-type bottles with syringes, filtered in-line (Swinnex-mounted, Whatman GF/F), and captured in acid-cleaned polyethylene tubes. Nutrient concentrations for nitrate + nitrite, ammonium, phosphate, and silicate were measured colorimetrically with a Bran and Luebbe AutoAnalyzer III (Hansen & Koroleff, 1999) onboard the ship within a few hours of collection. Working standards were prepared at each station and checked against certified reference material (KANSO CRM) inserted into the sample runs. Analytical detection limits were 0.03  $\mu\text{M}$  for nitrate, 0.02  $\mu\text{M}$  for nitrite, 0.05  $\mu\text{M}$  for phosphate, and 0.1  $\mu\text{M}$  for silicate. Ammonium concentrations were measured using the method of Holmes et al. (1999) with a detection limit of 0.02  $\mu\text{M}$ .

**Variables Measured** Nitrate, nitrite, ammonium, phosphate, and silicate

## Analytical Method 2

**Analytical Method Name** Coulometric titration (Dissolved inorganic carbon analysis)

**Method Link**

**Method Summary** Samples were collected in 250-mL glass bottles, preserved with 100  $\mu\text{L}$  of saturated mercuric chloride solution, capped with ground glass stoppers greased with Apiezon M, and sealed with electrical tape. Samples were then stored in the dark at 4°C until analysis at the Institute for Ocean Sciences in Sidney, British Columbia, within 10 months of collection. The coulometric DIC analysis utilized either a SOMMA or VINDTA 3D (MARIANDA) extraction system. Measurements were calibrated against certified reference materials (CRM batches 88, 115, and 133, provided by Andrew Dickson, Scripps Institute of Oceanography). Analyses of duplicate DIC samples indicated a precision of  $\pm 1 \mu\text{mol kg}^{-1}$  ( $n = 27$ ).

**Laboratory** Institute for Ocean Sciences, Fisheries and Oceans Canada

**Comments**

**Variables Measured** Dissolved inorganic carbon

## Analytical Method 3

**Analytical Method Name** Titration

**Method Link**

**Method Summary** Samples were collected in the field following the same protocol as DIC samples. Measurements of TA used open-cell potentiometric titrations with nonlinear least squares end-point determination. These measurements were calibrated against certified reference materials (CRM batches 88, 115, and 133, provided by Andrew Dickson, Scripps Institute of Oceanography). Analyses of duplicate TA samples indicated a precision of  $\pm 3 \mu\text{mol kg}^{-1}$  ( $n = 23$ ).

**Laboratory** Institute for Ocean Sciences, Fisheries and Oceans Canada

**Comments**

**Variables Measured** Total Alkalinity
