Description	Link to the preprint. Final version published in [<i>*Cryptologia*</i>] (https://doi.org/10.1080/01611194.2023.2223562) (Aug. 6, 2023). In 2013, an archeological curator bought a Victorian-era silk bustle dress from an antique mall in Maine. When the curator, Sara Rivers-Cofield, examined the dress, she found a hidden pocket that contained mysterious handwritten messages that appeared to be some sort of code. Since then, codebreakers have tried to solve the messages without success. The so-called "Silk Dress cryptogram" became one of the top 50 unsolved codes and ciphers in the world...

Description

For a decade, codebreakers have tried—and failed—to solve the case of the crumpled paper that was found stuffed in a secret pocket under the bustle and inside the seams of a silk dress from the 1880s. Over the years, the mystery even earned its own moniker: The Silk Dress Cryptogram. Now, we have some answers—and they come from unlikely sources: the National Oceanic and Atmospheric Administration (NOAA) and a data analyst at the University of Manitoba.
