Name	Lake Winnipeg Community-Based Monitoring Network Dataset
Description	LWCBMN's citizen-generated data is providing valuable insights. The network has identified phosphorus hotspots, including areas with some of the highest phosphorus exports ever reported in Manitoba. LWCBMN is also learning that water flow matters - a finding which suggests that phosphorus loading to Lake Winnipeg can be reduced by replicating dry conditions in hotspot areas using natural wetlands, constructed ponds and dam. Clicking on the link above will take you to the Lake Winnipeg Datastream where the cbm data is hosted.

Name	LWF LWF Community Based Monitoring Storymap 2016
Description	In 2016, partnering with the Seine-Rat River Conservation District and the La Salle-Redboine Conservation District, the Lake Winnipeg Foundation (LWF) launched a pilot field study to test drive the data collection and analysis protocols developed by LWF's science advisors. From March to October 2016, over 200 samples from 12 sites across the two conservation districts were collected and analyzed for phosphorus concentration.
