Dataset Name	Devils Lake – Red River Basin Fish Parasite and Pathogen Project Qualitative Risk Assessment
Dataset General Type	Devils Lake - Red River Basin
Dataset Type	Dataset
Dataset Level	
Program Website	
Keyword Vocabulary	Polar Data Catalogue
Keyword Vocabulary URL	https://www.polardata.ca/pdcinput/public/keywordlibrary
Theme	
Title	Freshwater
URL	https://canwin-datahub.ad.umanitoba.ca/data/en/group/freshwater
Dataset Status	Complete
Maintenance and Update Frequency	Not planned
Dataset Last Revision Date	2014-12-05
Dataset DOI	10.5203/0zsn-0204
Metadata Creation Date	2022
Publisher	CanWIN

Name	Red River Delta Fish Parasite Results - 2006

Description	<p>Twenty-six species of parasites were recovered from nine species of fish hosts. A summary of results shows: 1. To date none of the fish parasites identified as potential pathogens to Lake Winnipeg fish by Williamson et al (2005) have been found in the Red River delta fish samples; 2. Two new parasite species known to be pathogenic in fish were discovered in the samples i.e. <i>Bothriocephalus acheilognathi</i> and <i>Sanguinicola occidentalis</i>; 3. The time of invasion by these two parasite species into The Hudson Bay drainage is unknown; 4. <i>Bothriocephalus acheilognathi</i> was widely distributed being present in six species of fish and found in the south and north basins of Lake Winnipeg. 5. <i>Bothriocephalus acheilognathi</i> most frequently infected (prevalence of 74%) the cyprinid fish host, <i>Notropis atherinoides</i> (Emerald shiner). 6. <i>Bothriocephalus acheilognathi</i> was found exclusively in young of the year emerald shiners. 7. <i>Bothriocephalus acheilognathi</i> was recovered from the intestine of older and larger pike (<i>Esox lucius</i>), walleye (<i>Sander vitreum</i>), sauger (<i>Sander canadensis</i>) white bass (<i>Merone chrysops</i>), goldeye (<i>Hiodon alosoides</i>). 7. The Myxozoan occurred on the gills of emerald shiner, occasionally causing severe pathology.</p>
