Dataset Collection Start Date	2014-07-15
Dataset Collection End Date	2014-07-15
Sample Collection	
Sample Collection 1	
Sampling Instrument Name	Sea Bird 911plus+
Standardized Sampling Instrument Name	CTD

Field	Value
Sample Collection Method Name	CTD profile
Comment	
Method Link	
Method Summary	The CTD sensor is lowered and raised through the water column, capturing measurements of seawater temperature, salinity, and seawater pressure
Method Description Type	Methods
Sample Collection 2	
Sampling Instrument Name	SeaPoint sensor
Standardized Sampling Instrument Name	Probe/Sensor
Sample Collection Method Name	Chlorophyll-a fluorescence measurements
Comment	
Method Link	
Method Summary	The SeaPoint sensor is lowered and raised through the water column, capturing measurements of chlorophyll-a fluorescence.
Method Description Type	Methods
Sample Collection 3	
Sampling Instrument Name	Seabird SBE-43

Field	Value
Standardized Sampling Instrument Name	
Sample Collection Method Name	Oxygen concentration measurement
Comment	
Method Link	
Method Summary	The Seabird SBE-43 sensor is lowered and raised through the water column, measuring the dissolved concentration of oxygen.
Method Description Type	Methods
Sample Collection 4	
Sampling Instrument Name	WetLabs ECO
Standardized Sampling Instrument Name	
Sample Collection Method Name	Dissolved organic matter fluorescence measurements
Comment	
Method Link	
Method Summary	The WetLabs ECO sensor is lowered and raised through the water column, measuring the fluorescence of dissolved organic matter (FDOM).
Method Description Type	Methods
Activity Collection Type	Field Observation

Analytical Method	
Analytical Method 1	
Analytical Method Name	Nitrate, nitrite, ammonium, phosphate, and silicate analysis
Method Link	https://doi.org/10.1002/9783527613984.ch10
Method Summary	<p>Nutrient samples were collected directly from the Niskin-type bottles with syringes, filtered in-line (Swinnex-mounted, Whatman GF/F), and captured in acid-cleaned polyethylene tubes. Nutrient concentrations for nitrate + nitrite, ammonium, phosphate, and silicate were measured colorimetrically with a Bran and Luebbe AutoAnalyzer III (Hansen & Koroleff, 1999) onboard the ship within a few hours of collection. Working standards were prepared at each station and checked against certified reference material (KANSO CRM) inserted into the sample runs. Analytical detection limits were 0.03 μM for nitrate, 0.02 μM for nitrite, 0.05 μM for phosphate, and 0.1 μM for silicate. Ammonium concentrations were measured using the method of Holmes et al. (1999) with a detection limit of 0.02 μM.</p>
Laboratory	Université Laval
Comments	<p>Additional method citation: Holmes, R. M., Aminot, A., K��rouel, R., Hooker, B. A., & Peterson, B. J. (1999). A simple and precise method for measuring ammonium in marine and freshwater ecosystems. https://doi.org/10.1139/f99-128</p>

Field	Value
Variables Measured	Nitrate, nitrite, ammonium, phosphate, and silicate
Analytical Method 2	
Analytical Method Name	Coulometric titration (Dissolved inorganic carbon analysis)
Method Link	
Method Summary	<p>Samples were collected in 250-mL glass bottles, preserved with 100 μL of saturated mercuric chloride solution, capped with ground glass stoppers greased with Apiezon M, and sealed with electrical tape. Samples were then stored in the dark at 4°C until analysis at the Institute for Ocean Sciences in Sidney, British Columbia, within 10 months of collection. The coulometric DIC analysis utilized either a SOMMA or VINDTA 3D (MARIANDA) extraction system. Measurements were calibrated against certified reference materials (CRM batches 88, 115, and 133, provided by Andrew Dickson, Scripps Institute of Oceanography). Analyses of duplicate DIC samples indicated a precision of $\pm 1 \mu\text{mol kg}^{-1}$ (n = 27).</p>
Laboratory	Institute for Ocean Sciences, Fisheries and Oceans Canada
Comments	
Variables Measured	Dissolved inorganic carbon
Analytical Method 3	
Analytical Method Name	Titration
Method Link	

Field	Value
Method Summary	<p>Samples were collected in the field following the same protocol as DIC samples. Measurements of TA used open-cell potentiometric titrations with nonlinear least squares end-point determination. These measurements were calibrated against certified reference materials (CRM batches 88, 115, and 133, provided by Andrew Dickson, Scripps Institute of Oceanography). Analyses of duplicate TA samples indicated a precision of $\pm 3 \mu\text{mol kg}^{-1}$ (n = 23).</p>
